

Marsilli @ CWIEME 2008

Coil Winding, Insulations & Electrical Manufacturing Exhibitions

Castelleone, May 16th 2008

CWIEME in Berlin, the world-largest show focused to coil winding, insulation and electronic manufacturing, is constantly growing year after year: In 2008 the space used for the exhibition will be enlarged again using four halls of the Berlin Exhibition center. CWIEME in only 12 years has consolidated the role of world leading exhibition for this sector, with 560 exhibitors coming from 40 different countries.

In 2007 Marsilli has been successfully present to CWIEME, sharing the booth with its partner ATOP: following this experience, in 2008 Marsilli, will participate for the first time to CWIEME with its own booth. Marsilli and ATOP will organize several common events to link their booths, to confirm the fruitful evolution of the partnership between the two companies.

The presence of Marsilli in Berlin, confirms its market-leading position as winding machine producer, and represents a further step to demonstrate the company determination in building-up customer relationships, defining, in function of the market indications, the next-years group's strategy. Marsilli is glad to invite all the exhibition visitors to visit his 80 square meters booth, in the Messegelände Berlin - Hall 1.2-2115, since June 10th to 12th.

The guests will have the opportunity to see two stand-alone winding proposals by Marsilli:

- a BW 8-60 Winder to demonstrate a proposal for a cost-effective, light winding application.
- a Mars 4-150 Winder with bifilar technique and skeining unit to show the solution for a winding case requiring a more articulated process, spacing from thinner to thicker wire.

To share the know-how on wire-connection processes, a specific lab area will be equipped to offer the visitors the possibility to experience live demonstrations of the following technologies:

- resistance Welding
- pulsed Arc Spot Welding
- thermo-compression bonding
- pump Soldering

Marsilli competences in complex automatic lines, including coil preparation, coil finishing and further assembly operations will be shown in a dedicated area.

Take advantage of this opportunity to come and see us, our staff will be pleased to give you further information on our new project plus of course on all of Marsilli range of products.

To obtain a free entry ticket to the show you can register, following the on-line instructions, at http://www.coilwindingexpo.com/visitor_registration_form.asp.

If you are not planning to visit the CWIEME show, you can anyhow look at our web site at www.marsilli.com where you will find interesting information on the Marsilli group.
